

Hannefilt-XP

Bezugstyp:	Sonderpolyurethan	
Härtebereich:	70 Shore A	
Erhältliche Farben:	schwarz	
Empfohlene Belagsstärke:	min. 4 mm - max. 25 mm	
Temperaturbeständigkeit:	trocken naß	kontinuierlich 80°C / Höchstwert 90°C kontinuierlich 40°C / Höchstwert 50°C
Eigenschaften und Vorteile:	Covering quality specially developped and used for the production of cigarette filters. Vs other elastomers it has excellent mechanical properties, upto 3x better. This results in assistance to a longlasting homogenous filling of the cigarette of the cellulose acetate. Resists to the agents used for the processing of the cellulose acetate for processing, flavor, softening, flame retarding, ... The covering quality has antistatic properties and as such its helps to avoid dust attraction during the process.	
Spezifische Eigenschaften:	Antistatisch
